# Invitation

It is our great pleasure to invite you to the 2013 International Symposium on "Innovative Strategies for Drug Development and Successful Business Development Partnerships", which is co-organized by Institute of Drug Research & Development, Chungnam National University, Korea Drug Development Fund and the Chungcheong Regional Chapter, the Pharmaceutical Society of Korea.

As we all are aware, failure of drug candidate at the late drug development stage due to insufficient efficacy as well as unpredicted toxicity has a significant impact not only for the company which is developing the drug candidate from the financial perspective but also for the patients suffering from the diseases.

In this symposium, we would like to discuss about innovative drug development strategies which could eventually contribute to the successful licensing-out. Seven distinguished speakers from United States, Japan and Korea are invited in this symposium and will present about their recent experiences on this topic.

We are sure that this symposium will provide valuable information to the scientists in this field. We wish you an enjoyable and enlightening symposium.
