COMING

Ecobliss India Pvt. Ltd.

URL	www.ecobliss.in
Established Year	2007
Annual Sales	5 million USD
Sales Experience or Exporting Countries	USA, Central Europe, Russia, Australia, Middle East
Do you have Korean Partner or Agent?	NO

Company Profile

Since inception Ecobliss is market leader in recyclable blister and high-visibility packaging and in pharmaceutical wallet solutions. We invented the eco-friendly cold seal packaging technology and the patented child-resistant solution Locked4Kids.

Our experience covers the entire spectrum of packaging, including design & development, production of packaging components, packaging machines and even to fine-tune packaging activities in your facility.

About the Product

Pharmaceutical Wallet packaging solutions:
Pharmaceutical wallets or blister wallets are most used for clinical trials, commercial sales packs and for promotion of drugs. The wallet packaging in pharma/healthcare consists of primary blister strips combined with our unique cold seal blister cards to form a perfect packaging for end users.

Physician Samples:
Physician samples or doctor’s samples are excellent way to promote any new pharmaceutical drug or existing drug. These play key role in disclosing the information/ benefits of drugs when prescribed to patient. Traditionally, these are provided in so called cache covers. At Ecobliss, we create a unique way of designing the physician samples keeping the brand in mind. Ecobliss Physician samples can be customized and can be made into various shapes, sizes and designs. We intend to discuss with the brand owners or marketing personnel to get their ideas across for their brand and implement them in the packaging.

BOOTH NO.

7C203

Ecobliss India Pvt. Ltd.

About the Product

Child Resistant Packaging:

Locked4Kids is the world's first child-resistant and senior-friendly reclosable carton box. It's extremely difficult, but at the same time fascinating to create something so simple, inexpensive, and easy to produce and at the same time easy to use for everyone... except of course for little children.

There is a growing trend towards packaging tablets and capsules in a blister strip first and then in a retail carton. A blister warrants the integrity of tablets and capsules much better than a bottle. Cartons are the best and the most economical solution to package, but – until now – the only option to package blisters in a child-resistant way is by using all kinds of specialty packaging available in the market.

For that reason, Ecobliss has started the development of Locked4Kids cartons in 2013

Cold Seal Packaging:

Ron Linssen, founder of Ecobliss Group, discovered and invented cold seal technology in blister packaging. In cold seal blister packaging, only pressure is required to make perfect bond between the two blister cards. An Ecobliss pressure sensitive cohesive is applied on rear side of blister cards. The sealing does not require any heat or electricity but only application of pressure does the sealing. Cold seal blister packaging is very simple to use and can automated as well to support your process of packaging. The plastic blisters are trapped between a fold-over cold seal blister card and then bonded with simple application of pressure. Conventional heat seal single blister cards are limited to basic water based printed coating. But with our cold seal technology, the blister cards can be customized to several print finishes like met pet, foil stamping, hybrid UV, Matt finish etc., which provides an aesthetically beautiful packaging. Another great advantage of ecobliss cold seal technology is that packaging is an eco-friendly and is not exposed to any hazardous or uncomfortable radiation, smell and heat. Our sustainable model of cold seal packaging consists of plastic blister which is easily recyclable as well
